

Practice Activity Answers

Case Example 1:

Answer: No, *103 Underweight* does not apply because the new cut-off definition (for computer-down growth plotting) is equal to or less than (\leq) 2nd percentile weight-for-length. Maya's weight-for-length plots closer to the 5th percentile.

Case Example 2:

Answer: Brady does not qualify for *113 Obese* or *114 Overweight* because he isn't old enough to meet the defined age for those nutrition risk criteria. He qualifies for *115 High Weight-For-Length* because his growth plots equal to or above (\geq) 98th percentile weight-for-length which is the cut-off definition for the new risk criterion (for computer-down growth plotting).

Case Example 3:

Answer: Yes, Emma qualifies for *121 Short Stature Or At Risk Of Short Stature* because her length-for-age is equal to or less than (\leq) 2nd percentile which is the cut-off definition for short stature (for computer-down growth plotting).
